

A fixed pretraining budget
a million dollars of flops

```
graph TD; A["A fixed pretraining budget  
a million dollars of flops"] --> B["Spend it on a  
bigger model"]; A --> C["Spend it on  
more data"]; B --> D["GPT-3 at 175 B was  
too big for its budget"]; C --> D; D --> E["Since then: parameter  
counts  
flatten, token counts climb"];
```

Spend it on a
bigger model

Spend it on
more data

GPT-3 at 175 B was
too big for its budget

Since then: parameter
counts
flatten, token counts climb
