

```
graph TD; A{How much data do you have?} -- "massive, ImageNet scale or more" --> B[Vision Transformer<br/>better at using large data,<br/>captures long-range relations]; A -- "anything smaller" --> C[ConvNet<br/>spatial prior makes it<br/>far more data efficient];
```

How much data
do you have?

massive, ImageNet scale or
more

Vision Transformer

better at using large data,
captures long-range relations

anything smaller

ConvNet

spatial prior makes it
far more data efficient
