

Who decides the next
step?

```
graph TD; A[Who decides the next step?] --> B[You do, at design time  
the control flow is in your code]; A --> C[The model does, at run time  
the control flow is in the prompt  
and the tool results]; B --> D[That is a workflow  
testable, cheap, predictable]; C --> E[That is an agent  
flexible, expensive, hard to test];
```

You do, at design time

the control flow is in your code

That is a **workflow**

testable, cheap, predictable

**The model does, at run
time**

the control flow is in the prompt
and the tool results

That is an **agent**

flexible, expensive, hard to test
