

Dense layers
process each token
independently

Attention
looks at tokens
as a set

```
graph TD; A[Dense layers process each token independently] --> C[Nothing in the model knows about order]; B[Attention looks at tokens as a set] --> C; C --> D[Shuffle every word in every English sentence]; D --> E[Identical attention scores. Identical accuracy.];
```

**Nothing in the model
knows about order**

Shuffle every word in
every English sentence

Identical attention scores.
Identical accuracy.
