

Who decides the next
step?

```
graph TD; A[Who decides the next step?] --> B[You do, at design time<br/>control flow lives in your code]; A --> C[The model does, at run time<br/>control flow lives in the prompt<br/>and the tool results]; B --> D[That is a workflow<br/>testable, cheap, predictable]; C --> E[That is an agent<br/>flexible, expensive, hard to test];
```

You do, at design time

control flow lives in your code

That is a **workflow**

testable, cheap, predictable

**The model does, at run
time**

control flow lives in the prompt
and the tool results

That is an **agent**

flexible, expensive, hard to test
