

Image divided into
an $S \times S$ grid

```
graph TD; A[Image divided into an S x S grid] --> B[Each grid cell predicts]; B --> C[1 bounding box<br/>4 numbers]; B --> D[1 confidence score<br/>1 number]; B --> E[Class probabilities<br/>91 numbers];
```

The diagram is a flowchart with a light blue background. It starts with a box at the top containing the text 'Image divided into an S x S grid'. A straight arrow points down from this box to a second box in the center containing 'Each grid cell predicts'. From this central box, three arrows branch out downwards to three separate boxes at the bottom. The leftmost box contains '1 bounding box' and '4 numbers'. The middle box contains '1 confidence score' and '1 number'. The rightmost box contains 'Class probabilities' and '91 numbers'.

Each grid cell predicts

1 bounding box
4 numbers

1 confidence score
1 number

Class probabilities
91 numbers
