

loss

$$w \leftarrow w - \eta r \cdot dL/dw$$

$$\eta = 0.28$$

$$-2.45 - 0.28 \cdot -1.038 = -2.159$$

$$-2.159 - 0.28 \cdot -1.463 = -1.749$$

$$-1.749 - 0.28 \cdot -1.812 = -1.242$$

$$-1.242 - 0.28 \cdot -1.413 = -0.847$$

$$-0.847 - 0.28 \cdot -0.545 = -0.694$$

...

The step shrinks on its own as the slope flattens — nothing in the rule schedules that.
